Dr. Engelmann;

I sent a package of plants by mail yesterday and neglected to post this letter with names etc at the same time. I would like to have you examine them and return the names as soon as convenient. If any of the spec's are imperfect or for any reason you are not positive about the correctness of the name please so state, for the plants are to be exhibited at the centennial and I wish no mistakes to creep in.

can be furnished. Should I find it to be an annual, but still could not be very positive it has been so long since I gathered it.

I am greatly obliged for the names of the last package. I think you did not mention No. 37 of that list in your answer. You call No. 53 a narrow leaved form of Psoralea argophylla. I have since seen specs of it labelled by Dr. Gray who calls it Lespedeza capitata var. angustifolia. Will you please reexamine it. Of No 39. Potentilla rivalis var. pentandra, I have only one very poor specimen. It was gathered on the margin of a creek flowing into the Des Moines River. The soil was very wet being almost on a level with the surface of the stream. The vegetation was luxurient. If I remember rightly it grew from 12' - 15' high, with a very flat cymose top. No one else in the State has gathered it. I found it while on a days visit to Humboldt; could go to the same spot again were I there. Do not think it

Yours Truly
J. C. Arthur

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

Rev-Dear
Sir

Charles City, Iowa
Dec. 7" 1881.

Dear Sir;-

I am informed
by Mr. R. D. Cratty of
Emmett Co, this State, that
you have specimens
of a Sagittaria sent-
by him (and others) which
may prove a new species
or is at-least-an inter-
esting form. Will you
be kind enough to com-
municate your conclusions
so I may embody them
in my fourth supplement
to the "Flora of Iowa"?

Also, please inform me
where I can find your
description of Quercus Muhl-
enbergii. I have your "Oaks of
the U.S.", published in 1876, but
nothing later & no descriptions
except Gray's Manual.

Resp. Your
J. C. Arthur.

MISSOURI BOTANICAL GARDEN

Ames, Iowa.
Nov. 13th 1882

Mr. [illegible] Dakota

My Dear Sir: — I see that Wood in his Class-book p. 810 says he received Marsilia vestita from Iowa near the Mississippi river, but — in the Botanist and Florist (a later work) credits Iowa with M. uncinata, Br. I have no means of examining Report of Nicollet's Exp. 1839, or the Monatsb. Acad. Berlin, 1863, 423 where I suppose Al. Braun has spoken of the Iowa plant. Will you be so kind as to examine these works and tell me just what they say? You see, there seem to have been two plants collected and they may both be M. uncinata. I have no notion where Devil's lake is.

Yours &c
J. C. Arthur

Am early and great loser. Answer will be a favor.
